# CyberHoot's Policy Module Benefits

Businesses manage cyber-risk with mandatory technical controls (MFA and strong passwords). However, outside of technical controls, how do you ensure secure outcomes? Employees need discretionary control requirements conveyed in cyber-governance policies to reduce significant business risk. CyberHoot automates this entire process for you, leading to strong cyber-resilience and protection.

## Automated Compliance

Fully automate annual distribution of cyber-governance policies to employees, track compliance to 100% passing audits easily,, and avoid manual tracking in rusty old filing cabinets.
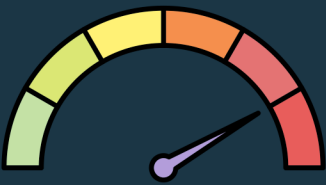

## Human Resources Automation

Publish new employee orientation material, the company Handbook, HR documents (NDAs, non-competes), all with legally binding eSignatures and automated reporting.

## Customizable Templates

CyberHoot provides cyber governance policy and process templates easily adapted and adopted by companies to build robust, defense-in-depth cybersecurity programs that stand up to hackers and audits.
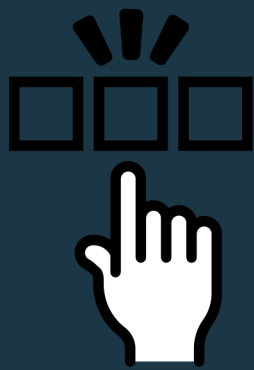

## Recommended Policies & Processes

Adopt the six prescribed policies to ensure you're following best practices when it comes to cyber governance policies and processes. All companies need these to secure their business.

## Reduce Risk Quickly

Eliminate common business failure points (wire fraud, gift card purchases, or ransomware) from our extended templates process library easily, confidently, and with minimal time invested.

## Legally Binding Signatures

Capture legally binding signatures to guide and support employees, while enabling legally-backed disciplinary actions for compliance failures when or if necessary.
